

## Chromatic Super CAZ/AVI

Chromogenic medium for the detection of  
Ceftazidime-avibactam resistance in Gram-negative bacteria.

### Chromatic Super CAZ/AVI

Chromatic Super CAZ/AVI is a selective and differential chromogenic medium used for screening ceftazidime-avibactam resistance in Enterobacterales and *Pseudomonas aeruginosa*.

Results can be interpreted after incubation for 18-24 hours. Subculture to a non-selective medium is required for confirming identification, antimicrobial susceptibility testing and epidemiological typing.
